PROBLEM

(GATE EC-2006 Q.14) Let $x(t) \leftrightarrow X(j\omega)$ be Fourier Transform pair. The Fourier Transform of the signal $x(5t - 3)$ in terms of $X(j\omega)$ is given as

- (A) $\frac{1}{5}e^{-\frac{j3\omega}{5}}X\left(\frac{j\omega}{5}\right)$
- (B) $\frac{1}{5}e^{\frac{j3\omega}{5}}X\left(\frac{j\omega}{5}\right)$
- (C) $\frac{1}{5}e^{-j3\omega}X\left(\frac{j\omega}{5}\right)$
- (D) $\frac{1}{5}e^{j3\omega}X\left(\frac{j\omega}{5}\right)$

SOLUTION

By the time scaling property of Fourier transform,

$$x(\alpha t) \xrightarrow{\mathcal{F}} \frac{1}{|\alpha|} X\left(\frac{j\omega}{|\alpha|}\right) \quad (0.0.1)$$

$$x(5t) \xrightarrow{\mathcal{F}} \frac{1}{5} X\left(\frac{j\omega}{5}\right) \quad (0.0.2)$$

By the time shifting property of Fourier transform,

$$x(t - t_0) \xrightarrow{\mathcal{F}} e^{-j\omega t_0} X(j\omega) \quad (0.0.3)$$

$$x\left(5\left(t - \frac{3}{5}\right)\right) \xrightarrow{\mathcal{F}} \frac{1}{5} e^{-\frac{j3\omega}{5}} X\left(\frac{j\omega}{5}\right) \quad (0.0.4)$$

The correct option is (A).
