## PROBLEM

(GATE EC-2006 Q.14) Let  $x(t) \leftrightarrow X(f)$  be Fourier Transform pair. The Fourier Transform of the signal  $x(5t - 3)$  in terms of  $X(f)$  is given as

- (A)  $\frac{1}{5}e^{-\frac{j6\pi f}{5}}X\left(\frac{f}{5}\right)$
- (B)  $\frac{1}{5}e^{\frac{j6\pi f}{5}}X\left(\frac{f}{5}\right)$
- (C)  $\frac{1}{5}e^{j6\pi f}X\left(\frac{f}{5}\right)$
- (D)  $\frac{1}{5}e^{j6\pi f}X\left(\frac{f}{5}\right)$

## SOLUTION

By the time scaling property of Fourier transform,

$$x(\alpha t) \xrightarrow{\mathcal{F}} \frac{1}{|\alpha|}X\left(\frac{f}{|\alpha|}\right) \quad (0.0.1)$$

$$x(5t) \xrightarrow{\mathcal{F}} \frac{1}{5}X\left(\frac{f}{5}\right) \quad (0.0.2)$$

By the time shifting property of Fourier transform,

$$x(t - t_0) \xrightarrow{\mathcal{F}} e^{-j2\pi f t_0}X(f) \quad (0.0.3)$$

$$x\left(5\left(t - \frac{3}{5}\right)\right) \xrightarrow{\mathcal{F}} \frac{1}{5}e^{-\frac{j6\pi f}{5}}X\left(\frac{f}{5}\right) \quad (0.0.4)$$

Let  $x(t) = \text{rect}(t)$ .

$$X(f) = \text{Sa}(f) \quad (0.0.5)$$

For  $x(t) = \text{rect}(5t - 3)$

$$\frac{1}{5}e^{-\frac{j6\pi f}{5}}X\left(\frac{f}{5}\right) = \frac{1}{5}e^{-\frac{j6\pi f}{5}}\text{Sa}\left(\frac{f}{5}\right) \quad (0.0.6)$$

The correct option is (A).
